4.8 EU Entries 71

1 General Information

1.1 Information on Data Privacy

The format documented herein describes an open interface. The data is available in unencrypted form, and can be viewed with conventional programs (such as a text editor, for example).
Financial accounting data, however, is personal and must be handled in a strictly confidential manner. Transferring data via e-mail does not ensure that the data remains unchanged, unseen by third-parties, and arrives at the correct recipient as soon as possible.
As a result, when transferring data between a client and a tax consultant, appropriate steps must be taken to protect the data, such as the use of encryption and a signature. With its DATEV e:secure product, DATEV offers its members a bundle of products to secure their electronic mail correspondence. Further information can be found in **Info Database, document no. 0903245**.

Requirements of the German GoBD
In order to fulfill the requirements of the German GoBD with regard to locking and unchangeability, the export and import formats for entry records and prima nota entries will be expanded to include a posting lock flag. These new formats will be made available starting with the version of the program released for 2015/2016.
Please note that all batch imports for entry records and prima nota entries which are not converted to the new formats will automatically be locked from next year forward.
All the necessary information regarding the new formats can be found in **Info Database, document no. 1080697**.

1.2 Volume Limit for Entry Records

When importing a batch of entries, there is a volume limit which determines the maximum number of entries which can be processed per file. There is no limit when importing ledger account labels and customer/vendor master data. When importing a batch of entries, the limit is 99,999 entries.

1.3 DATEV World and Import Possibilities

The following pages cover the DATEV pro accounting applications, which are the software applications predominantly used when importing master and transaction data (from third-party systems). The DATEV format serves as the standard interface in this regard, and is the format described in this documentation. Please visit **www.datev.de/schnittstellen** for additional information.

As a matter of principle, we recommend testing the created import solutions during a pilot phase to ensure that all aspects specific to the application have been taken into consideration. If you plan on implementing these solutions at places of business, you should only do so in coordination with the company's accounting firm.
Depending on the terms of the agreement, either the company's accounting firm or the businessperson (if they choose to post entries themselves) is responsible for the accuracy of the records provided.

1.4 Accounting

Consultancy Accounting pro

Consultancy Accounting pro brings together a tax consulting firm's two main areas of business: processing a company's ongoing financial accounting and preparing annual reports. Consultancy Accounting pro was designed to meet a consulting firm's organizational requirements and makes it possible to handle the entire accounting process from a PC. Data can be made available for import using either storage media or an individual data path.

Consultancy Accounting compact pro

Consultancy Accounting compact pro is a process-oriented solution that offers all the core features of a professional software application used to handle financial accounting and create annual reports. The integration of complementary solutions (such as asset accounting or cost accounting) makes it easier to handle day-to-day work. In addition, you optimize the flow of data throughout your consulting firm.

Accounting pro

Accounting pro is a solution designed for work-sharing and takes the information needs of the individual companies (clients) into account. Accounting pro supports a wide variety of different workflows and as such, adapts to the consulting firm's own organizational processes. As a result, the consulting firm and the client company work with an identical system. Data can be made available for import using either storage media or an individual data path.

Accounting compact pro

The Accounting compact pro application is a financial accounting system with the basic features of open item bookkeeping. The range of features available is tailored to the needs of smaller companies. Data can be made available for import using either storage media or an individual data path.

2 The DATEV Format

2.1 Introduction

The DATEV format is a text file with a predefined filename and sentence structure. The filename contains information to identify the file as being in the DATEV format and make it available for batch processing.

The file structure of the text file exported/imported is defined as follows (detailed information can be found in the following chapters):

Line 1:	Header (serves to assist in the interpretation of the following data)
Line 2:	Headline (headline of the user data)
Line 3–n:	Records (user data)

The following data types/categories can be exported and imported using the DATEV format:

Transaction Data:	Batches of entries
	Recurring entries
Master Data:	Entry text constants
	Ledger account labels
	Account notes
	Customers/vendors
	Text codes
	Payment conditions
	Miscellaneous addresses
	Asset accounting entry records
	Asset accounting branches

2.2 What's New in October 2015?

- The entry batch format was expanded to include the fields complementary tax balance sheet data, locking, and payment date. The recurring entries format was expanded to include fields for business owner data.
- In the Customers/Vendors master data format, the fields for IBAN were correctly removed and fields for various locks added.
- Both a new tax and adjustment key were added for MOSS cases. See Section 3.6.
- Bug fixes and type changes were carried out for several formats.

3 Description of the DATEV Format

3.1 Recommendations for Different Data Categories

Data Category: Entry Batch
We recommend the following when creating a file for an entry batch: Create an individual text file per posting period so that they can each be processed for the respective posting period.

Data Category: Account Labels
We recommend the following when creating a file for account labels: The file should only contain individually labeled accounts; standard account labels are managed by the DATEV chart of accounts and should not be overwritten.

Data Category: Customers/Vendors Master Data
In the accounting applications' data model, you can use

- Multiple addresses
- Multiple forms of communication data
- Multiple bank accounts

You can also export/import the correspondence address and invoice address. Only one communication number will be exported/imported per communication medium for each business partner. (Exception: the communication medium telephone; in this case an additional business line number can be exported/imported.)

If a correspondence and/or invoice address is transferred in the DATEV format, it will be created or updated.

If data related to communication media is transferred in the DATEV format, either a communication medium will be created and marked as standard, or the communication number will be updated that is currently marked as standard. (Exception: the communication medium telephone; in this case an additional business line number can be created/updated.)

Information for up to ten bank accounts can be transferred. These records are then created or updated according to their bank number.

A customer's or vendor's complete bank account details are deleted in the master data when a zero (0) is passed in the Bank Identifier Code field.

Data Category: Miscellaneous Addresses
The same conditions outlined in the aforementioned "Customers/Vendors Master Data" category apply to this category.

Data Category: Text Codes (cases in the Agriculture and Forestry SKR 14 chart of accounts)

This data category is used when transactions are posted to ledger accounts in the Agriculture and Forestry SKR 14 chart of accounts).

Overview of the DATEV Format's General Settings:

Settings	Data Category				
	Entry Batch	Recurring Entries	Entry Text Constants	Customers/ Vendors	Ledger Account Labels
Character Set	ANSI	ANSI	ANSI	ANSI	ANSI
Line Structure	Variable	Variable	Variable	Variable	Variable
Field Separator Symbol	Semicolon	Semicolon	Semicolon	Semicolon	Semicolon
Separator Thousands Places	No Symbol	No Symbol	(Not Applicable)	Period	(Not Applicable)
Separator Decimal Places	Comma	Comma	(Not Applicable)	Comma	(Not Applicable)
Date Format	DDMM	DDMM	(Not Applicable)	DDMMYYYY	(Not Applicable)
Information for Import Automation (Header)	Yes	Yes	Yes	Yes	Yes
Headline	Yes	Yes	Yes	Yes	Yes
Symbol Around Text Fields	Quotes	Quotes	Quotes	Quotes	Quotes
Symbol Around Text Fields Doubled	Yes	Yes	Yes	Yes	Yes
Separator Symbol at End of Record	No	No	No	No	No

Settings	Data Category					
	Account Notes	Text Codes	Payment Conditions	Misc. Addresses	Asset Accounting Entry Records	Asset Accounting Branches
Character Set	ANSI	ANSI	ANSI	ANSI	ANSI	ANSI
Line Structure	Variable	Variable	Variable	Variable	Variable	Variable
Field Separator Symbol	Semicolon	Semicolon	Semicolon	Semicolon	Semicolon	Semicolon
Separator Thousands Places	(Not Applicable)	(Not Applicable)	(Not Applicable)	Period	No Symbol	(Not Applicable)
Separator Decimal Places	(Not Applicable)	(Not Applicable)	None	Comma	No Symbol	(Not Applicable)
Date Format	(Not Applicable)	(Not Applicable)	(Not Applicable)	DDMMYYYY	DD.MM.YYYY	DD.MM.YYYY
Information for Import Automation (Header)	Yes	Yes	Yes	Yes	Yes	Yes
Headline	Yes	Yes	Yes	Yes	Yes	Yes
Symbol Around Text Fields	Quotes	Quotes	Quotes	Quotes	Quotes	Quotes
Symbol Around Text Fields Doubled	Yes	Yes	Yes	Yes	Yes	Yes
Separator Symbol at End of Record	No	No	No	No	No	No

3.2 File Naming Conventions

The filename is subject to the following restrictions:
1. The filename must begin with the prefix DTVF_ or EXTF_.
2. The filename must end with .csv.

When exporting from or importing into DATEV applications, the filename is marked with the prefix "DTVF_" (DATEV Format).
The prefix "DTVF" is reserved for DATEV applications.

If you are using a third-party application to create a file in the DATEV format that you want to import using batch processing, use the prefix "EXTF_" (External Format).

The first five symbols of the file name are the prefix.

Acronym	Explanation
DTVF_	Reserved for DATEV
EXTF_	For file formats from third-party applications

Examples of Filenames

DATEV Formats (protected formats)	External File Formats
DTVF_Entrytextconst_<date_time>.csv	
DTVF_Ledgerlabels_<date_time>.csv	
DTVF_textcodes_<date_time>.csv	
DTVF_GP_Master_<date_time>.csv	
DTVF_MiscAddr_<date_time>.csv	
DTVF_ZB_<date_time>.csv	EXTF_<indiv.addition>.csv
DTVF_AcctNote_<date_time>.csv	
DTVF_EntryBatch_<date_time>_ <consecutive number of the export process>.csv	
DTVF_RecurringEntries_<date_time>.csv	
DTVF_OpenItemBranches_<date_time>.csv	

3.3 Header Structure

The "header" is the first line of the text file. It contains information used to interpret the file during batch processing (information pertaining to import automation).

The header for master data (ledger account labels, customers/vendors, text codes, payment conditions, entry text constants, account notes, asset accounting entry records, asset accounting branches) contains less information than the header for transaction data (entry batches); the fields are simply transferred empty. Exception: Recurring entries also contain a shortened header.
The header's structure is identical across all data categories, and **the number of fields is always the same**.

Information about the following table:

- Required fields are fields which must be transferred containing a value.
- Fields of type **text** must be put in quotation marks; if a text field is transferred without content, it must at least contain the quotation marks.
- If a text field contains quotation marks, they must be doubled.
- Length values indicated refer to maximum length.

Detailed Explanation of Header Structure
You must adhere to the predefined header structure of an externally created text file. The following table contains a detailed explanation of header structure based on this specific example:
"EXTF";510;21;"Buchungsstapel";7;20150329065650770;;"";"";"";
29098; 55003;20150101;4;20130301;20130331;
"March 2013 Invoices";"MM";1;0;; "EUR";;"";;;"";;;"";"

No.	Header Field	Required	Example	Length	Type	Comments
1	DATEV Format Label	Yes	"EXTF"	4	Text	EXTF= for file formats that were created by third-party programs. DTVF= reserved for DATEV The label must be indicated in capital letters and in quotations marks
2	Version Number	Yes	510	3	Number	Version number of the header. Should changes be made in the future to the header structure (such as the inclusion of additional fields), it can still be processed in backwards-compatible fashion based on the header version.
3	Data Category	Yes	21	2	Number	21 = Entry batch 65 = Recurring entries 67 = Entry text constants 20 = Ledger account labels 47 = Account notes 16 = Customers/vendors 44 = Text codes 46 = Payment conditions 48 = Miscellaneous addresses 63 = Asset accounting entry records 62 = Asset accounting branches

No.	Header Field	Required	Example	Length	Type	Comments
4	Format Name	Yes	"Buchungs-stapel"		Text	List of Format Names: – Buchungsstapel – Wiederkehrende Buchungen – Buchungstextkonstanten – Kontenbeschriftungen – Debitoren/Kreditoren – Textschlüssel – Zahlungsbedingungen – Diverse Adressen – Anlagenbuchführung – Buchungssatzvorlagen – Anlagenbuchführung – Filialen The format names need to be used exactly as listed here. **Please note:** The German format names must be used here.
5	Format Version	Yes	2	3	Number	Version number of the format. Should changes be made in the future to the format structure (such as the inclusion of additional fields), it can still be processed in backwards-compatible fashion based on the format version. Current format versions: – Entry batch = 7 – Recurring entries = 2 – Entry text constants = 1 – Account labels = 2 – Account notes = 1 – Customers/vendors = 4 – Text code = 2 – Payment condition = 2 – Miscellaneous addresses = 2 – Asset accounting entry records = 1 – Asset accounting branches = 1
6	Created On		20130329065650770	17	Number	Format: YYYYMMDDHHMMSS (+3 spaces for milliseconds)
7	Imported			17	Number	The header field cannot be filled. It will be filled during the import process.
8	Origin		""	2	Text	Origin code 2 characters that can be selected freely During import, the origin code is automatically replaced with "BP" (= batch processing).
9	Exported By		""	25	Text	When exporting from an accounting application, the name of the user that exported the data is also exported.
10	Imported By			25	Text	Will be filled during the import process. When importing into the accounting application, this field will contain the user's username.
11	Consultant	Yes	29098	7	Number	Consultant number
12	Client	Yes	55003	5	Number	Client number
13	FY Begin	Yes	20130101	8	Number	First day of fiscal year Format: YYYYMMDD

No.	Header Field	Required	Example	Length	Type	Comments
14	Length of Ledger Account	Yes	4	1	Number	Smallest length of ledger account = 4 → customers/vendors have 5 spaces Largest length of ledger account = 8 → customers/vendors have 9 spaces

The following header fields are only relevant to an entry batch, however –
the header's structure is identical across all data categories, and **the number of fields is always the same.**

15	Date From	Yes	20130301	8	Number	"From" date of the entry batch Format: YYYYMMDD
16	Date To	Yes	20130331	8	Number	"To" date of the entry batch Format: YYYYMMDD
17	Label		"March 2013 Invoices"	30	Text	Name of the entry batch
18	Initials		"JS"	2	Text	For example: JS= John Smith When exporting from a DATEV pro accounting application, the initials are used from the exported entry batch.
19	Record Type		1	1	Number	1 = Financial accounting 2 = Annual financial statements If no record type is indicated, a financial accounting batch will be created by default.
20	Accounting Reason		0	2	Number	0 or empty = not tied to any specific reason 50 = Business law 30 = Tax law 64 = IFRS 40 = For calculation 11 = Reserved 12 = Reserved
21	Locking	Ja	1	1	Number	Empty = Not defined, will automatically be locked from the annual 2016/17 version on 0 = Not locked 1 = Locked
22	Currency Code		"EUR"	3	Text	Currency code When importing documents without a specific currency code, this currency code will be used.
23	Reserved				Number	
24	Reserved				Text	
25	Reserved				Number	
26	Reserved				Number	
27	Reserved				Text	
28	Reserved				Number	

No.	Header Field	Required	Example	Length	Type	Comments
29	Reserved				Number	
30	Reserved				Text	
31	Application information		“5/2015”	16	Text	Processing flag of the transferring application

Examples of Header Structure
Header created by a third-party program

”RE”;”Smith”;””;29098;55003;20150101;4;;;”;”;”;;0;;”;”;;”;”;;;”03”;;;”;”

3.4 Headline (Field Labels)

The second line of the text file contains a headline which documents the individual fields.

- This line is required.
- The field labels in the headline must be separated by a semicolon.
- Symbols to indicate text (quotation marks) are not used for the field labels.

3.5 Field Descriptions

Information about the following format description tables:
DP = Maximum permissible decimal places
Max. Length = Maximum length of the field including all available separators (separators for decimal places/no separators for thousand places), for example transaction value: length 10.2 places → 1234567890.12 → maximum length = 13 places.

Passing a blank space in a field will delete the content of that field in the target system

Additional information about the individual fields can be found after the table; corresponding cross references are highlighted blue and underlined in the Description column.

3.5.1 Field Description – Entry Batch

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
1	Transaction Value (without debit or credit label)	Value	10	2	13	Yes	Example: 1234567890.12 Must always be a positive value.
2	Debit/Credit Label	Text	1	0	1	Yes	Default value = S The transaction value's debit/credit symbol pertains to the account that is specified in the Account field: D = Debit =S C = Credit =H **Please note:** The credit/debit label must be used with the German terms S (Soll = debit) and H (Haben = credit).
3	Transaction Value Currency Code	Text	3	0	3		Three-digit ISO currency code (see the Info Database, document no. 1080170); indicates the currency of the underlying transaction. If no value is indicated, the currency code specified in the header is used.

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
4	Exchange Rate	Number	4	6	11		The exchange rate determines how the transaction value of a transaction from a non-EMU country that is specified in a foreign currency is to be recalculated in the base currency. Example: 1234.123456 **Please Note:** The value 0 cannot be used.
5	Base Transaction Value	Value	10	2	13		If the base transaction value field is used, the base transaction value currency code field must also be used Example: 1123123123.12
6	Base Transaction Value Currency Code	Text	3	0	3		Currency code of the base currency saved in the application. If the base transaction value currency code field is used, the base transaction value field must also be used Pay attention to the ISO code! (see Info Database, document no. 1080170)
7	Account	Account	9	0	9	Yes	Ledger or Personal Account Number May contain a maximum of 8 or 9 digits, depending on the information in the header. Personal account length may only be one digit longer than the defined length of ledger accounts.
8	Contra Account (without posting key)	Account	9	0	9	Yes	Ledger or Personal Account Number May contain a maximum of 8 or 9 digits, depending on the information in the header. Personal account length may only be one digit longer than the defined length of ledger accounts.
9	Posting Key	Text	2	0	2		Tax Key and/or Adjustment Key
10	Invoice Date	Date	4	0	4	Yes	Invoice Date (Format: DDMM)
11	Invoice Field 1	Text	12	0	12		Invoice/Receipt Number Invoice field 1 is the "key" for managing open items. A payment or credit is only offset against an open item when the invoice/receipt number is identical to invoice field 1.
12	Invoice Field 2	Text	12	0	12		Invoice/receipt number or open item processing information

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
13	Discount	Value	8	2	11		Discount value/deduction Can only be used with payments. Example: 12123123.12 **Please Note:** The value 0 cannot be used.
14	Posting Text	Text	60	0	60		
15	Posting Lock	Number	1	0	1		Reminders/Payment Freeze The invoice can be excluded from reminders/ payment proposal. 1 = posting lock 0/no value = no lock Only relevant when posting an invoice to a personal account (open item bookkeeping).
16	Miscellaneous Address Number	Text	9	0	9		Address number of a miscellaneous address Only relevant in conjunction with open item bookkeeping.
17	Business Partner's Bank	Number	3	0	3		Used when a business partner’s specific bank should be used for a direct debit or bank transfer. Only relevant in conjunction with open item bookkeeping.
18	Reminder Code	Number	2	0	2		The reminder code is used in Accounting pro to identify entries/items as interest on unpaid invoices/reminder fees. For example, when creating payment reminders, interest will not be calculated for these items. 31 = Interest on unpaid invoices 40 = Reminder fee Only relevant in conjunction with open item bookkeeping.
19	Interest Lock	Number	1	0	1		This field can be used to indicate an interest lock; as a result, no interest will be calculated when creating a payment reminder letter for this item. Only relevant in conjunction with open item bookkeeping. No value and 0 = no lock 1 = interest lock

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
20	Link to Invoice	Text	210	0	210		A link to the entry's related invoice that has been stored in a document management system (such as DATEV Document Organization, DATEV DMS). The Invoice Link consists of an application shortcut and GUID. Since the Invoice Link field is a text field, the quotation marks need to be doubled in the interface file. Example: "BEDI ""8DB85C02-4CC3-FF3E-06D7-7F87EEECCF37""".
21	Invoice Info – Type 1	Text	20	0	20		For a DATEV format that was created with a DATEV pro accounting application, this field can contain information from an invoice (such as an electronic account balance, for example). If the content exceeds the length of the invoice info field, the information is continued in the next invoice info field. **Important Note:** Invoice information is always comprised of two components: invoice info type and invoice info content. If you would like to use invoice info, please add content to both fields. Example: Invoice info type: Each respective bank account's transactions Invoice info content: The specific entry content which matches the aforementioned information type
22	Invoice Info – Content 1	Text	210	0	210		
23	Invoice Info – Type 2	Text	20	0	20		
24	Invoice Info – Content 2	Text	210	0	210		
25	Invoice Info – Type 3	Text	20	0	20		
26	Invoice Info – Content 3	Text	210	0	210		
27	Invoice Info – Type 4	Text	20	0	20		
28	Invoice Info – Content 4	Text	210	0	210		
29	Invoice Info – Type 5	Text	20	0	20		
30	Invoice Info – Content 5	Text	210	0	210		
31	Invoice Info – Type 6	Text	20	0	20		
32	Invoice Info – Content 6	Text	210	0	210		
33	Invoice Info – Type 7	Text	20	0	20		
34	Invoice Info – Content 7	Text	210	0	210		
35	Invoice Info – Type 8	Text	20	0	20		
36	Invoice Info – Content 8	Text	210	0	210		
37	KOST1 – Cost Center	Text	8	0	8		KOST1 is used to assign the transaction to a cost center for subsequent cost calculations.
38	KOST2 – Cost Center	Text	8	0	8		KOST2 is used to assign the transaction to a cost center for subsequent cost accounting.
39	KOST Quantity	Number	9	2	12		The KOST quantity field is used to record the value of a cost center's specific reference parameter. This parameter can be kg, g, cm, m, or %, for example. The reference parameter is defined in the cost accounting master data. Example: 123123123.12

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
40	EU Member State and VAT ID Number	Text	15	0	15		The VAT ID number is comprised of a ■ 2-digit country code (see Info Database, doc. no. 1080169) ■ 13-digit VAT ID number
41	EU Tax Rate	Number	2	2	5		Only for relevant EU entries: The applicable tax rate in the EU country of destination. Example: 12.12
42	Alt. Taxation Method	Text	1	0	1		An alternative taxation method can be transferred with the entries for all entries that should be processed using a method of taxation that differs from the method stipulated in the client's master data: A = Taxation based on value of actual receipts N = No VAT calculation L = Lump sum (applicable to Agriculture and Forestry, for example) S = Taxation based on value of services rendered
43	Cases Related to Goods and Services	Number	3	0	3		Cases set forth in Article 13b, Paragraph 1, Clause 1, No. 1-5 of Germany's Value Added Tax Act **Please Note:** The value 0 cannot be used.
44	Additional Functions for Goods and Services	Number	3	0	3		Tax rate/features for cases related to goods and services **Please Note:** The value 0 cannot be used.
45	Posting Key 49 Main Function Type	Number	1	0	1		When using the posting key 49 for "Other tax rates", the tax case must also be indicated.
46	Posting Key 49 Main Function Number	Number	2	0	2		
47	Posting Key 49 Additional Functions	Number	3	0	3

86	Additional Information – Type 20	Text	20	0	20		
87	Additional Information – Content 20	Text	210	0	210		
88	Quantity	Number	8	0	8		Only has an effect on tax cases related to the SKR 14 Agriculture and Forestry chart of accounts. In the case of other SKR charts of accounts, these fields are skipped or exported with no value.
89	Weight	Number	8	2	11		

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
90	Payment Method	Number	2	0	2		Open item bookkeeping local information. Priority: The payment method field has a higher priority as invoice field 2 (and as a result, a payment condition can be locked using payment method). 9 = posting is locked
91	Receivable Type	Text	10	0	10		Open item bookkeeping local information.
92	Assessment Year	Number	4	0	4		Open item bookkeeping local information. Format: YYYY
93	Assigned Payment Due Date	Date	8	0	8		Open item bookkeeping local information. Format: DDMMYYYY
94	Discount Type	Number	1	0	1		1 = Purchase of goods 2 = Purchase of raw materials and supplies
95	Order Number	Text	30	0	30		General label used to identify the order/project
96	Record Type	Text	2	0	2		AA = Advance payment requested/installment invoice AG = Advance payment received (cash receipt) AV = Advance payment received (liability) SR = Final invoice SU = Final invoice (reclassified) SG = Final invoice (cash receipt) S0 = Other
97	VAT Key (Advance Payments)	Number	2	0	2		VAT key of the later final invoice
98	EU Member State (Advance Payments)	Text	2	0	2		EU member state of the later final invoice (see Info Database, doc. no. 1080169)
99	Cases Related to Goods and Services (Advance Payments)	Number	3	0	3		Cases Related to Goods and Services (Later Final Invoice) Cases set forth in Article 13b, Paragraph 1, Clause 1, No. 1-5 of Germany's Value Added Tax Act **Please Note:** The value 0 cannot be used.
100	EU Tax Rate (Advance Payments)	Number	2	2	5		EU Tax Rate of the Later Final Invoice Only for relevant EU entries: The applicable tax rate in the EU country of destination. Example: 12.12
101	Revenue Account (Advance Payments)	Account	9	0	9		Revenue Account of the Later Final Invoice

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
102	Origin Code	Text	2	0	2		Is replaced with BP (batch processing) during import.
103	Empty Field	Text	36	0	36		Used by DATEV.
104	KOST Date	Date	8	0	8		Format DDMMYYYY
105	Client Reference	Text	35	0	35		
106	Discount Block	Number	1	0	1		
107	Shareholder Name	Text	76	0	76		
108	Shareholder Number	Number	4	0	4		
109	Identification Number	Text	11	0	11		
110	Allottee Number	Text	20	0	20		
111	Posting Lock Until	Date	8	0	8		
112	Description of SoBil Case	Text	30	0	30		
113	SoBil Entry Flag	Number	2	0	2		
114	Lock	Number	1	0	1		Empty = Not defined, will automatically be locked beginning with the version released at the change of the year 2016/2017 0 = Not locked 1 = Locked This field is only relevant when not yet defined in the header. A dataset with lock = 1 means the entire entry batch is locked.
115	Payment Date	Date	8	0	8		
116	Date Assn. Tax Period	Date	8	0	8		

3.5.2 Description of Fields – Recurring Entries

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
1	B1	Number	1	0	1		In field **B1**, you select a key which stipulates how to handle invoice field 1 (invoice number). The keys have the following meanings: 1 = The invoice number has a maximum of 12 digits and cannot be changed during processing. 2 = The invoice number has a maximum of 10 digits, and two digits will be added to the right side of the number during processing. 3 = The invoice number is not recorded, and instead the application automatically counts up from a first invoice number during processing.
2	Transaction Value Currency Code	Text	3	0	3		Three-digit ISO currency code (see the Info Database, document no. 1080170); indicates the currency of the underlying transaction. If no value is indicated, the currency code specified in the header is used.
3	Transaction Value (without debit or credit label)	Value	10	2	13		Example: 1234567890.12 Must always be a positive value.
4	Debit/Credit Label	Text	1	0	1		Default value = D The transaction value's debit/credit symbol pertains to the account that is specified in the **Account** field: D = Debit C = Credit
5	Exchange Rate	Number	4	6	11		The exchange rate determines how the value of a transaction from a non-EMU country that is specified in a foreign currency is to be recalculated in the base currency. Example: 1234.123456 **Please Note:** The value 0 cannot be used.
6	Base Transaction Value	Value	10	2	13		If the base transaction value field is used, the base transaction value currency code field must also be used (see chapter 3.6). Example: 1123123123.12
7	Base Transaction Value Currency Code	Text	3	0	3		Currency code of the base currency saved in the application. If the base transaction value field is used, the base transaction value currency code field must also be used (see chapter 3.6). Pay attention to the ISO code! (see Info Database, document no. 1080170)

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
8	Posting Key	Text	2	0	2		Tax Key and/or Adjustment Key (see chapter 3.6)
9	Contra Account (without posting key)	Account	9	0	9		Ledger or Personal Account Number May contain a maximum of 8 or 9 digits, depending on the information in the header. Personal account length may only be one digit longer than the defined length of ledger accounts. (see chapter 3.6)
10	Invoice Field 1	Text	12	0	12		Invoice/Receipt Number Invoice field 1 is the key for managing open items. A payment or credit is only offset against an open item when the invoice/receipt number is identical to invoice field 1.
11	Invoice Field 2	Text	12	0	12		Invoice/receipt number or open item processing information (see chapter 3.6)
12	Start Date	Date	8	0	8		The start date determines the date on which the recurring entry will begin (Format: DDMMYYYY)
13	Account	Account	9	0	9		Ledger or Personal Account Number Ledger account number: max. 8 digits Personal account number: max. 9 digits, depending on the information in the header. Personal account length may only be 1 digit longer than the defined length of ledger accounts. (see chapter 3.6)
14	Quantity	Number	8	0	8		Only has an effect on cases related to the SKR 14 Agriculture and Forestry chart of accounts. In cases involving other SKR charts of accounts, these fields are skipped or exported with no value. Example: 12312312.12
15	Weight	Number	8	2	11		
16	KOST1 – Cost Center	Text	8	0	8		KOST1 is used to assign the transaction to a cost center for subsequent cost calculations.
17	KOST2 – Cost Center	Text	8	0	8		KOST2 is used to assign the transaction to a cost center for subsequent cost accounting.

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
18	KOST Quantity	Number	9	2	12		The KOST quantity field is used to record the value of a cost center's specific reference parameter. This parameter can be kg, g, cm, m, or %, for example. The reference parameter is defined in the cost accounting master data. Example: 123123123.12
19	Discount	Value	8	2	11		Discount value/deduction Can only be used with payments. Example: 12123123.12 **Please Note:** The value 0 cannot be used.
20	Posting Text	Text	60	0	60		
21	Posting Lock	Number	1	0	1		Reminder/Payment Lock The invoice can be excluded from reminders/ payment proposal. 1 = posting lock 0/no value = no lock Only relevant when posting an invoice to a personal account (open item bookkeeping).
22	Miscellaneous Address Number	Text	9	0	9		Address number of a miscellaneous address (see chapter 3.6) Only relevant in conjunction with open item bookkeeping.
23	Business Partner's Bank	Number	3	0	3		Used when a business partner's specific bank should be used for a direct debit or bank transfer. Only relevant in conjunction with open item bookkeeping.
24	Reminder Code	Number	2	0	2		The reminder code is used in Accounting pro to identify entries/items as interest on unpaid invoices/reminder fees. For example, when creating payment reminders, interest will not be calculated for these items. 31 = Interest on unpaid invoices 40 = Reminder fee Only relevant in conjunction with open item bookkeeping.

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
25	Interest Lock	Number	1	0	1		This field can be used to indicate an interest lock; as a result, no interest will be calculated when creating a payment reminder letter for this item. Only relevant in conjunction with open item bookkeeping. No value and 0 = no lock 1 = interest lock
26	Link to Invoice	Text	210	0	210		A link to the entry's related invoice that has been stored in a document management system (such as DATEV Document Organization, DATEV DMS).
27	EU Member State and VAT ID Number	Text	15	0	15		The VAT ID number is comprised of a ■ 2-digit country code (see Info Database, doc. no. 1080169) ■ 3-digit VAT ID
28	EU Tax Rate	Number	2	2	5		Only for relevant EU entries: The applicable tax rate in the EU country of destination. Example: 12.12
29	Alt. Taxation Method	Text	1	0	1		An alternative taxation method can be transferred with the entry for all entries that should be processed using a method of taxation that differs from the method stipulated in the client's master data: A = Taxation based on value of actual receipts N = No VAT calculation L = Lump sum (applicable to Agriculture and Forestry, for example) S= Taxation based on value of services rendered
30	Cases Related to Goods and Services	Number	3	0	3		Cases set forth in Article 13b, Paragraph 1, Clause 1, No. 1-5 of Germany's Value Added Tax Act (see chapter 3.6) **Please Note:** The value 0 cannot be used.
31	Posting Key 49 Main Function Type	Number	1	0	1		When using the posting key 49 for "Other tax rates", the tax case must also be indicated. (see chapter 3.6)
32	Posting Key 49 Main Function Number	Number	2	0	2		
33	Posting Key 49 Additional Functions	Number	3	0	3		

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
34	Additional Information – Type 1	Text	20	0	20		
35	Additional Information – Content 1	Text	210	0	210

74	Payment Method	Number	2	0	2		Open item bookkeeping local information Priority: The payment method field has a higher priority as invoice field 2 (and as a result, a payment condition can be locked using payment method). 9 = posting is locked
75	Receivable Type	Text	10	0	10		Open item bookkeeping local information

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
76	Assessment Year	Number	4	0	4		Open item bookkeeping local information Format: YYYY
77	Assigned Payment Due Date	Date	8	0	8		Open item bookkeeping local information Format: DDMMYYYY
78	Last On	Date	8	0	8		Format: DDMMYYYY
79	Next Due Date	Date	8	0	8		Format: DDMMYYYY
80	End Date	Date	8	0	8		End date of the series of entries. Must be a date after the date recorded in the start date field Format: DDMMYYYY
81	Interval Type	Text	3	0	3	Yes	DAY = Daily MON = Monthly
82	Time Period	Number	3	0	3		In the case of interval type DAY: 1–999 In the case of interval type MON: 1–99
83	Weekday	Number	3	0	3		In the case of interval type MON: 1 = Monday 2 = Tuesday 4 = Wednesday 8 = Thursday 16 = Friday 32 = Saturday 64 = Sunday
84	Month	Number	2	0	2		Empty – not currently used
85	Reference Number – Day of the Month	Number	2	0	2	Yes	In the case of interval type MON: 1–31
86	Reference Number – Day of the Week	Number	1	0	1		In the case of interval type MON: 1 = first 2 = second 3 = third 4 = fourth 5 = last
87	End Type	Number	1	0	1		1 = No end date 2 = End after number of events 3 = Ends on
88	Shareholder Name	Text	76	0	76		
89	Shareholder Number	Number	4	0	4		
90	Identification Number	Text	11	0	11		
91	Allotttee Number	Text	20	0	20		
92	SEPA Mandate Reference	Text	35	0	35		

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
93	Posting Lock Until	Date	8	0	8		
94	KOST Date	Date	8	0	8		
95	Description of SoBil Case	Text	30	0	30		
96	SoBil Entry Flag	Number	2	0	2		

3.5.3 Description of Fields – Entry Text Constants

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
1	Number	Number	4	0	4	YES	Number of entry text constants
2	Posting Text	Text	60	0	60		

3.5.4 Description of Fields – Account Labels

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
1	Account	Account	8	0	8	Yes	Account number, dependent on the length of ledger accounts specified in the header (max. 8 digits)
2	Account Label	Text	40	0	40		Label used to identify the account
3	Language ID	Text	5	0	5		Language ID of the account label de-DE = German en-GB = English

3.5.5 Description of Fields – Account Notes

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
1	Account	Account	9	0	9	Yes	Account number, dependent on the length of ledger accounts specified in the header (max. 8 digits)
2	Note Content	Text	32000	0	32000		Unformatted account notes
3	Note Content with Formatting	Text	32000	0	32000		Formatted account notes

3.5.6 Description of Fields – Customers/Vendors Master Data

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
1	Account	Account	9	0	9	Yes	Personal account number, dependent on the information in the header Ledger account number length + 1 = length of personal account
2	Name (Addressee Type: Company)	Text	50	0	50		During importing, these fields are filled in the database, even if they do not correspond to the addressee type specified in field 7. This can lead to unwanted effects in the application. As a result, please only transfer the fields for the matching addressee type.
3	Business Purpose	Text	50	0	50		
4	Name (Addressee Type: Natural Person)	Text	30	0	30		
5	First Name (Addressee Type: Natural Person)	Text	30	0	30		
6	Name (Addressee Type: Not Provided)	Text	50	0	50		
7	Addressee Type	Text	1	0	1		0= Not provided 1= Natural person 2= Company not provided / default value = company
8	Brief Description	Text	15	0	15		
9	EU Member State	Text	2	0	2		The VAT ID number is comprised of a ■ 2-digit country code ■ 13-digit VAT ID number Please note that there cannot be a space between these two values.
10	EU VAT ID Number	Text	13	0	13		
11	Title	Text	30	0	30		
12	Title/Academic Degree	Text	25	0	25		Only relevant to the “natural person” addressee type. If a title/academic degree is indicated with an addressee type of “company,” the value will be added to the database, but will not be visible in the UI.
13	Title of Nobility	Text	15	0	15		Only relevant to the “natural person” addressee type. If a title of nobility is indicated with an addressee type of “company,” the value will be added to the database, but will not be visible in the UI.
14	Surname Prefix	Text	14	0	14		Only relevant to the “natural person” addressee type. If a surname prefix is indicated with an addressee type of “company,” the value will be added to the database, but will not be visible in the UI.

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
15	Address Type	Text	3	0	3		STR = Street PO = Post office box CC = Corporate client If the address type is not indicated, it will be automatically filled based on the transferred fields (street or post office box).
16	Street Address	Text	36	0	36		If both a street address and a post office box are indicated, both values will be added to the database; the post office box will be displayed on the business card in the customer/vendor master data.
17	Post Office Box	Text	10	0	10		
18	Zip Code	Text	10	0	10		
19	City	Text	30	0	30		
20	Country	Text	2	0	2		Indicated by the country's ISO code (see Info Database, document no. 1080169)
21	Additional Mailing Information	Text	50	0	50		
22	Additional Address Information	Text	36	0	36		Example: c/o Mr. Smith
23	Alternate Salutation	Text	30	0	30		Any desired text can be used here.
24	Alt. Delivery Identifier 1	Text	50	0	50		
25	Alt. Delivery Identifier 2	Text	36	0	36		
26	Mailing Address Identifier	Number	1	0	1		1 = Identifies a mailing address
27	Address Valid From	Date	8	0	8		Format: DDMMYYYY
28	Address Valid Until	Date	8	0	8		Format: DDMMYYYY
29	Telephone Number	Text	60	0	60		Standard telephone number
30	Notes (Telephone)	Text	40	0	40		
31	Management Telephone	Text	60	0	60		Management telephone number
32	Notes (Management Telephone)	Text	40	0	40		
33	E-Mail Address	Text	60	0	60		
34	Notes (E-Mail Address)	Text	40	0	40		
35	Website	Text	60	0	60

242	Flat Overdue Fee 2	Number	3	2	5		
243	Flat Overdue Fee 3	Number	3	2	5		

3.5.7 Description of Fields: Text Codes (relevant to cases pertaining to the Agriculture and Forestry SKR 14 chart of accounts)

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
1	Text Code Number	Number	4	0	4	Yes	Number of the text code Max. length = 3 if ledger account length = 7 Max. length = 4 if ledger account length = 8
2	Label	Text	40	0	40		Text code label
3	Reference Text Code	Number	4	0	4	Yes	Reference text code Max. length = 3 if ledger account length = 7 Max. length = 4 if ledger account length = 8
4	Debit Ledger Account	Account	8	0	8		Max. length is equal to the ledger account number length
5	Credit Ledger Account	Account	8	0	8		Max. length is equal to the ledger account number length
6	Language ID	Text	5	0	5		Text code language ID de-DE = German en-GB = English

3.5.8 Description of Payment Due Date Type

Using a payment condition, you can specify the net payment due date and/or up to two discount due dates with a time period and discount percentage for a posted invoice.

You can specify payment conditions with two payment due date types: in days or based on a specific date.

Type: Payment Due Date in Days
With a payment condition of type Payment Due Date in Days, the payment due date is calculated based on the number of days entered.

Example:
You specify that the net balance is due in 14 days, and a discounted balance (with 5.00 % discount) due in 7 days. For an invoice dated July 10th, this means: the net balance is due on July 24th, and the discounted balance due on July 17th.

Type: Payment Due Date with Date
With a payment condition of type Payment Due Date with Date, the discounted and net payment due dates are calculated based on specific dates entered. In this context, three payment due date periods can be specified.

Example:
For the first payment period, you specify that the following applies to an invoice with an invoice date between the 1st and 15th of the month: The net balance of the invoice is due by the 15th of the following month, and the discounted balance (with 5.00 % discount) is due by the 31st of the current month.

For the second payment period, you specify that the following applies to an invoice with an invoice date between the 15th and 31st of the month: The net balance of the invoice is due by the 31st of the following month, and the discounted balance (with 5.00 % discount) is due by the 15th of the following month.

3.5.9 Description of Fields – Payment Conditions

Please note: since no separators are used for decimal places in this format, the maximum length of the amount is determined by the length and the decimal places!

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
1	Number	Number	3	0	3	Yes	Value: 10–999
2	Label	Text	40	0	40		Payment condition label
3	Payment Due Date Type	Number	1	0	1		Payment due date type: 1 = Payment due date in days (entered as a number of days) 2 = Payment due date as date (entered as a specific date)
4	Discount 1 %	Value	2	2	4		Used with both payment due date types.
5	Discount 1 Days	Number	3	0	3		Time period in days
6	Discount 2 %	Value	2	2	4		Used with both payment due date types.
7	Discount 2 Days	Number	3	0	3		Time period in days
8	Due in Days	Number	3	0	3		Time period in days
9	Invoice Until/Time Period 1	Number	2	0	2		Value: 1–31 (= day of the month)
10	Discount 1 Date/Time Period 1	Number	2	0	2		1 to 31 (= day of the month)
11	Discount 1 Month/Time Period 1	Number	1	0	1		0 = Current month 1 = Next month 2 = Month after next
12	Discount 2 Date/Time Period 1	Number	2	0	2		Value: 1–31 (= day of the month)
13	Discount 2 Month/Time Period 1	Number	1	0	1		0 = Current month 1 = Next month 2 = Month after next
14	Due on Date/Time Period 1	Number	2	0	2		Value: 1–31 (= day of the month)
15	Due on Month/Time Period 1	Number	1	0	1		0 = Current month 1 = Next month 2 = Month after next
16	Invoice Until/Time Period 2	Number	2	0	2		Value: 1–31 Day of the month, abstract time period

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
17	Discount 1 Date/Time Period 2	Number	2	0	2		Value: 1–31 (= day of the month)
18	Discount 1 Month/Time Period 2	Number	1	0	1		0 = Current month 1 = Next month 2 = Month after next
19	Discount 2 Date/Time Period 2	Number	2	0	2		Value: 1–31 (= day of the month
20	Discount 2 Month/Time Period 2	Number	1	0	1		0 = Current month 1 = Next month 2 = Month after next
21	Due on Date/Time Period 2	Number	2	0	2		Value: 1–31 (= day of the month)
22	Due on Month/Time Period 2	Number	1	0	1		0 = Current month 1 = Next month 2 = Month after next
23	Invoice Until/Time Period 3	Number	2	0	2		Value: 1–31 (= day of the month)
24	Discount 1 Date/Time Period 3	Number	2	0	2		Value: 1–31 (= day of the month)
25	Discount 1 Month/Time Period 3	Number	1	0	1		0 = Current month 1 = Next month 2 = Month after next
26	Discount 2 Date/Time Period 3	Number	2	0	2		Value: 1–31 (= day of the month)
27	Discount 2 Month/Time Period 3	Number	1	0	1		0 = Current month 1 = Next month 2 = Month after next
28	Due on Date/Time Period 3	Number	2	0	2		Value: 1–31 (= day of the month)
29	Due on Month/Time Period 3	Number	1	0	1		0 = Current month 1 = Next month 2 = Month after next
30	Empty Field	Text	36	0	36		Used by DATEV.
31	Use	Number	1	0	1		Used by DATEV.

3.5.10 Description of Fields: Miscellaneous Addresses

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
1	Address Number	Text	9	0	9		alphanumeric
2	Account	Number	9	0	9		Personal account number that should be assigned to "miscellaneous address"
3	Title	Text	30	0	30		
4	Name (Addressee Type: Company)	Text	50	0	50		
5	Business Purpose	Text	50	0	50		
6	Brief Description	Text	15	0	15		
7	Name (Addressee Type: Natural Person)	Text	30	0	30		
8	First Name (Addressee Type: Natural Person)	Text	30	0	30		
9	Last Name (Addressee Type: Not Provided)	Text	50	0	50		
10	Addressee Type	Text	1	0	1		0 = Not provided 1 = Natural person 2 = Company Default value = company
11	Title/Academic Degree	Text	25	0	25		Only relevant to the “natural person” addressee type. If a title/academic degree is indicated with an addressee type of “company,” the value will be added to the database, but will not be visible in the UI.
12	Title of Nobility	Text	15	0	15		Only relevant to the “natural person” addressee type. If a title of nobility is indicated with an addressee type of “company,” the value will be added to the database, but will not be visible in the UI
13	Surname Prefix	Text	14	0	14		Only relevant to the “natural person” addressee type. If a surname prefix is indicated with an addressee type of “company,” the value will be added to the database, but will not be visible in the UI (see chapter 3.6).
14	Alternate Salutation	Text	30	0	30		Any desired text can be used here.
15	Address Type	Text	3	0	3		STR = Street PO = Post office box CC = Corporate client If the address type is not indicated, it will be automatically filled based on the transferred fields (street or post office box).

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
16	Street Address	Text	36	0	36		If both a street and a post office box are indicated, both values will be added to the database; the post office box will be displayed under "Miscellaneous Address" on the business card in the master data.
17	Post Office Box	Text	10	0	10		
18	Zip Code	Text	10	0	10		
19	City	Text	30	0	30		
20	Country	Text	2	0	2		Indicated by the country's ISO code (see Info Database, document no. 1080169)
21	Additional Mailing Information	Text	50	0	50		(see chapter 3.6)
22	Additional Address Information	Text	36	0	36		Example: c/o Mr. Smith
23	Alt. Delivery Identifier 1	Text	50	0	50		
24	Alt. Delivery Identifier 2	Text	36	0	36		
25	Mailing Address Identifier	Number	1	0	1		1 = Identifies a mailing address
26	Address Valid From	Date	8	0	8		Format: DDMMYYYY
27	Address Valid Until	Date	8	0	8		Format: DDMMYYYY
28	Alternate Salutation (Billing Address)	Text	30	0	30		
29	Address Type (Billing Address)	Text	3	0	3		Street = STR Post office box = PO Corporate client = CC
30	Street Address (Billing Address)	Text	36	0	36		
31	Post Office Box (Billing Address)	Text	10	0	10		
32	Zip Code (Billing Address)	Text	10	0	10		
33	City (Billing Address)	Text	30	0	30		
34	Country (Billing Address)	Text	2	0	2		
35	Additional Mailing Information (Billing Address)	Text	50	0	50		
36	Additional Address Information (Billing Address)	Text	36	0	36		
37	Alt. Delivery Identifier 1 (Billing Address)	Text	50	0	50		
38	Alt. Delivery Identifier 2 (Billing Address)	Text	36	0	36		

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
39	Address Valid From (Billing Address)	Date	8	0	8		Format: DDMMYYYY
40	Address Valid Until (Billing Address)	Date	8	0	8		Format: DDMMYYYY
41	Telephone Number	Text	60	0	60		Standard telephone number
42	Notes (Telephone)	Text	40	0	40		
43	Management Telephone	Text	60	0	60		Management telephone number
44	Notes (Management Telephone)	Text	40	0	40		
45	E-Mail Address	Text	60	0	60		
46	Notes (E-Mail Address)	Text	40	0	40		
47	Website	Text	60	0	60		
48	Notes (Website)	Text	40	0	40		
49	Fax	Text	60	0	60		
50	Notes (Fax)	Text	40	0	40		
51	Miscellaneous	Text	60	0	60		
52	Notes (Miscellaneous)	Text	40	0	40		
53	Bank Identifier Code 1	Text	8	0	8		
54	Bank Name 1	Text	30	0	30		
55	Bank Account Number 1	Text	10	0	10		
56	Country Code 1	Text	2	0	2		Indicated by the country's ISO code (see Info Database, document no. 1080169)
57	IBAN 1	Text	34	0	34		
58	Empty Field	Text	1	0	1		Value 1 = IBAN correct
59	SWIFT Code 1	Text	11	0	11		
60	Alt. Account Holder 1	Text	70	0	70		
61	Main Bank Account Identifier 1	Text	1	0	1		Identifies the bank account as the main account 1 = Yes 0 = No Only one bank account for a “miscellaneous address” can be designated as the main bank account.
62	Bank Account Number 1 Valid From	Date	8	0	8		Format: DDMMYYYY
63	Bank Account Number 1 Valid Until	Date	8	0	8		Format: DDMMYYYY
64	Bank Identifier Code 2	Text	8	0	8		
65	Bank Name 2	Text	30	0	30		
66	Bank Account Number 2	Text	10	0	10		

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
67	Country Code 2	Text	2	0	2		Indicated by the country's ISO code (see Info Database, document no. 1080169)
68	IBAN 2	Text	34	0	34		
69	Empty Field	Text	1	0	1		Value 1 = IBAN correct
70	SWIFT Code 2	Text	11	0	11		
71	Alt. Account Holder 2	Text	70	0	70		
72	Main Bank Account Identifier 2	Text	1	0	1		Identifies the bank account as the main account 1 = Yes 0 = No Only one bank account for a "miscellaneous address" can be designated as the main bank account.
73	Bank Account Number 2 Valid From	Date	8	0	8		Format: DDMMYYYY
74	Bank Account Number 2 Valid Until	Date	8	0	8		Format: DDMMYYYY
75	Bank Identifier Code 3	Text	8	0	8		
76	Bank Name 3	Text	30	0	30		
77	Bank Account Number 3	Text	10	0	10		
78	Country Code 3	Text	2	0	2		Indicated by the country's ISO code (see Info Database, document no. 1080169)
79	IBAN 3	Text	34	0	34		
80	Empty Field	Text	1	0	1		Value 1 = IBAN correct
81	SWIFT Code 3	Text	11	0	11		
82	Alt. Account Holder 3	Text	70	0	70		
83	Main Bank Account Identifier 3	Text	1	0	1		Identifies the bank account as the main account 1 = Yes 0 = No Only one bank account for a "miscellaneous address" can be designated as the main bank account.
84	Bank Account Number 3 Valid From	Date	8	0	8		Format: DDMMYYYY
85	Bank Account Number 3 Valid Until	Date	8	0	8		Format: DDMMYYYY
86	Bank Identifier Code 4	Text	8	0	8		
87	Bank Name 4	Text	30	0	30		
88	Bank Account Number 4	Text	10	0	10		
89	Country Code 4	Text	2	0	2		
90	IBAN 4	Text	34	0	34		

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
91	Empty Field	Text	1	0	1		Value 1 = IBAN correct
92	SWIFT Code 4	Text	11	0	11		
93	Alt. Account Holder 4	Text	70	0	70		
94	Main Bank Account Identifier 4	Text	1	0	1		Identifies the bank account as the main account 1 = Yes 0 = No Only one bank account for a “miscellaneous address” can be designated as the main bank account.
95	Bank Account Number 4 Valid From	Date	8	0	8		Format: DDMMYYYY
96	Bank Account Number 4 Valid Until	Date	8	0	8		Format: DDMMYYYY
97	Bank Identifier Code 5	Text	8	0	8		
98	Bank Name 5	Text	30	0	30		
99	Bank Account Number 5	Text	10	0	10		
100	Country Code 5	Text	2	0	2		Indicated by the country's ISO code! (see Info Database, document no. 1080169)
101	IBAN 5	Text	34	0	34		
102	Empty Field	Text	1	0	1		Value 1 = IBAN correct
103	SWIFT Code 5	Text	11	0	11		
104	Alt. Account Holder 5	Text	70	0	70		
105	Main Bank Account Identifier 5	Text	1	0	1		Identifies the bank account as the main account 1 = Yes 0 = No Only one bank account for a “miscellaneous address” can be designated as the main bank account.
106	Bank Account Number 5 Valid From	Date	8	0	8		Format: DDMMYYYY
107	Bank Account Number 5 Valid Until	Date	8	0	8		Format: DDMMYYYY
108	Bank Identifier Code 6	Text	8	0	8		
109	Bank Name 6	Text	30	0	30		
110	Bank Account Number 6	Text	10	0	10		
111	Country Code 6	Text	2	0	2		Indicated by the country’s ISO code (see Info Database, document no. 1080169)
112	IBAN 6	Text	34	0	34		
113	Empty Field	Text	1	0	1		Value 1 = IBAN correct
114	SWIFT Code 6	Text	11	0	11

176	Custom Field 6	Text	40	0	40		
177	Custom Field 7	Text	40	0	40		
178	Custom Field 8	Text	40	0	40		
179	Custom Field 9	Text	40	0	40		
180	Custom Field 10	Text	40	0	40		

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
181	SEPA Client Reference 1	Text	35	0	35		In the client reference field, you can enter in one client reference for the business partner per bank. In order to be used correctly, SEPA client management must include the client reference applicable to the authorizing customer.
182	SEPA Client Reference 2	Text	35	0	35		
183	SEPA Client Reference 3	Text	35	0	35		
184	SEPA Client Reference 4	Text	35	0	35		
185	SEPA Client Reference 5	Text	35	0	35		
186	SEPA Client Reference 6	Text	35	0	35		
187	SEPA Client Reference 7	Text	35	0	35		
188	SEPA Client Reference 8	Text	35	0	35		
189	SEPA Client Reference 9	Text	35	0	35		
190	SEPA Client Reference 10	Text	35	0	35		
191	External System Number	Text	15	0	15		Can be a customer account number when using centralized business partners, for example.

3.5.11 Description of Fields: Asset Accounting Sample Entry Records

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
1	Tax Assessment Area	Number	2	0	2		Denotes the tax assessment area 0 or empty = Not tied to a specific assessment area 50 = Business law 30 = Tax law 40 = For calculation 11 = Free 1 12 = Free 2 64 = IFRS
2	Account Number	Number	8	0	8	Yes	**Please Note:** The value 0 cannot be used.
3	Entry Record Type	Text	3	0	3	Yes	
4	Debit Account Number	Number	8	0	8	Yes	
5	Credit Account Number	Number	8	0	8	Yes	
6	Posting Text	Text	60	0	60	Yes	

3.5.12 Description of Fields: Asset Accounting Branches

No.	Field Name	Type	Length	DP	Max. Length	Req. Field	Description
1	Branch Number	Number	6	0	6	Yes	Number of the branch, must be unique
2	Branch Name	Text	60	0	60	Yes	

Imported data on branches overwrites existing data.

3.6 Explanations of Field Names and Terms Specific to DATEV

Field Name/Term	Explanation
Consultant Number	A number with a maximum of 7 digits (1000–9999999) assigned to the member by DATEV upon joining the collective.
Client Number	A number with a maximum of 5 digits (1–99999) assigned to the client by the consultant.
Date From	First entry date - the year indicated must be identical to the year in Date Until.
Date Until	Last entry date - the year indicated must be identical to the year in Date From
Debit/Credit Label	The debit/credit label applies to the field **Account**.
Contra account/account	Ledger account number or personal account number (based on the ledger account number length saved in the accounting database) Possibilities: Ledger account number length 4–8 personal account number always equal to ledger account number length +1 **For example:** ledger account number length = 4 → Personal account number length = 5 ledger account number length = 8 → Personal account number length = 9
Posting Key	Combination of adjustment key (first digit from the left) and tax key (second digit from the left).
Posting Key 49 (Other Tax Rates)	The tax key/posting key 49 is used when entering agricultural cases in order to record tax calculation functions independent of time (such as 9 % input VAT). Tax key 49 can only be used starting with documents dated January 1, 2007 and later. **Examples:** Posting code 49 with VAT input tax of 9 % (AV 30090) leads to the following field usage in the DATEV format:

Posting Key 49 Main Function Type	Posting Key 49 Main Function Number	Posting Key 49 Additional Functions
1	30	90

Field Name/Term	Explanation	
Tax Key	**Number**	**Meaning**
	1	VAT-exempt (with input tax deduction)
	2	VAT 7 %
	3	VAT 19 %
	4	Locked
	5	VAT 16 %
	6	Locked
	7	Input tax 16 %
	8	Input tax 7 %
	9	Input tax 19 %
	46	Services rendered (Art. 13b)
	49 **)	Other tax rates
	50–59	Customized VAT keys
	91	Services received (Art. 13b); input tax 7 %, VAT 7 %
	92	Services received (Art. 13b); input tax 0 %, VAT 7 %
	93	50 % reduction in the input tax reduction for vehicles that were purchased, manufactured, or leased between March 31, 1999, and December 31, 2003, that are also used privately or for purposes not related to the company.
	94 *)	Services received (Art. 13b); input tax 19 %, VAT 19 % **or** input tax 16 %, VAT 16 %
	95 *)	Services received (Art. 13b); input tax 0 %, VAT 19 % **or** input tax 0 %, VAT 16 %
	96	Split input tax 6.50 %
	97	Split input tax 16 %
	98	Split input tax 7 %
	99	Split input tax 19 %

*) The applicable tax rate is pre-allocated based on the date of the invoice. If pre-allocation is not correct, you can record an alternate tax rate in the **Select Case** pop-up window. If this window does not open automatically, select **Edit | Cases | Payables and Receivables** or the context menu item of the same name.

**) When entering the posting key, a pop-up window opens with the ability to select the related case.

Field Name/Term	Explanation
Adjustment Key	**Number** / **Meaning** 2 – General reversal 3 – General reversal for split input tax 4 – Suspension of automatic processing 8 – General reversal with suspension of automatic processing 9 ***) – Split input tax 31–35 – General reversal for entries with tax key 91–95 70– 79 – General reversal for entries with a customized VAT key 86 – General reversal with tax key 46 – Services rendered (Art. 13b) 89 **) – General reversal with tax key 49 – Other tax rates **) When entering the posting key, a pop-up window opens with the ability to select the related case. ***) You combine adjustment key 9 for split input tax with an input tax key from the **Meaning of Tax Keys** table. Tax keys are already listed there for the standard tax rates. If you would like to use adjustment key 90 for split input tax, you must post to an account with a tax calculation function (AV) so that the correct input tax can be calculated.
Meaning of tax and general reversal keys for entries pertaining to inner-EU transactions from assessment year 1993 onwards (6th and 7th digit of the contra account)	**Number** / **Meaning** 10/60 – Non-taxable revenue in Germany with a tax liability in another EU member state 11/61 – Non-taxable inner-EU delivery (with input tax deduction) 12/62 – Taxable inner-EU delivery with a reduced tax rate of 7 % 13/63 – Taxable inner-EU delivery with the full VAT rate of 19 % 15/65 – Taxable inner-EU delivery at the **old** tax rate (16 % for invoices dated January 1, 2007 and later) 17/67 – Taxable inner-EU delivery at the **old** tax rate (VAT 16 %, input tax 16 % for invoices dated January 1, 2007 and later) 18/68 – Taxable inner-EU delivery at the reduced tax rate (VAT 7 %, input tax 7 %) 19/69 – Taxable inner-EU delivery at the full tax rate (VAT 19 %, input tax 19 %) 44/48 – Electronic services (for invoices dated January 01, 2015 and after) 47/87 – Non-taxable miscellaneous services
Invoice Field 1	Invoice field 1 contains the assignment of a transaction to a invoice based on the invoice/receipt number.
Invoice Field 2	Invoice field 2 contains information used to process the entry batch in open item accounting. A wide variety of information is recorded in invoice field 2. This can include: the credit memo number of a credit memo, the payment due date, or a payment proposal.
Date	Invoice Date
Account/Contra Account	Ledger account number or personal account number (based on the ledger account number length saved in the accounting database) Possibilities: Ledger account number length 4–8 personal account number always equal to ledger account number length +1 For example: Ledger account number length = 4 → Personal account number length = 5 Ledger account number length = 8 → Personal account number length = 9

Field Name/Term	Explanation
KOST 1	KOST1 is used to assign the transaction to a cost center for subsequent cost accounting.
KOST 2	KOST2 is used to assign the transaction to a cost unit number for subsequent cost accounting.
KOST Quantity	The KOST quantity field is used to record the value of a cost center's specific reference parameter. This parameter can be kg, g, cm, m, or %, for example. The reference parameter is defined in the cost accounting master data.
Discount	The amount to discount a payment is specified in the discount field.
EU Member State	Country code
Value-Added Tax Identification Number	The identification number issued by the tax authority
EU Tax Rate	Only for relevant EU entries: The applicable tax rate in the EU country of destination.
Currency Code	Three-digit ISO code of the currency (see Info Database, document no. 1080170). Indicates the underlying currency of a particular value.
Base Currency Amount	In DATEV pro accounting applications, bookkeeping is carried out in a base currency. DATEV defines the base currency as the currency used in the application to calculate, save, and update values. In the event that entries are transferred in a foreign currency with an exchange rate, the base transaction value field can be used to ensure that the foreign currency is converted identically to the base currency; i.e. if a transaction with a value in a foreign currency is exported and the third-party application also converts the value to the existing base currency, this calculated base value can also be transferred. During batch processing, the application checks whether the transferred base value and the base value that was calculated by the DATEV pro accounting application are identical.
Currency Exchange Rate	The currency exchange rate indicates how to convert the foreign currency value specified in the **Transaction Value** field into the base currency when not from an EU country (ISO code, see Info Database, document no. 1080170).
Currency Code – Base Currency	Currency code of the base currency saved in the application (ISO code, see Info Database, document no. 1080170).
Miscellaneous Address Number	Using this field, you can assign a miscellaneous address when creating invoices. In this case, the **address number** must be saved in the master data under **Miscellaneous Addresses**.
Cases related to payables and receivables and additional functions related to payables and receivables	Art. 13b Value-Added Tax Act – client's VAT liability – overview of applicable cases (see Info Database, document no. 1034915).

4 Application Rules – DATEV Financial Accounting pro Software Applications

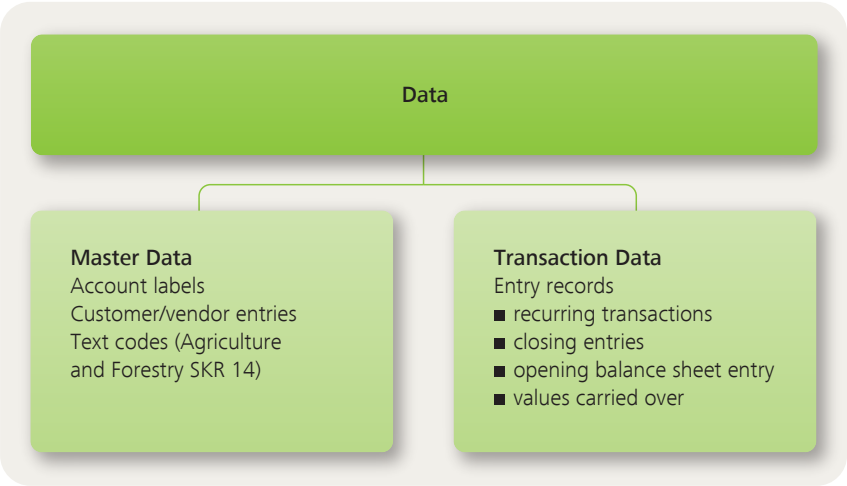
4.1 Date Types

Application Rules

This collection of key application rules serves to better understand the entry (posting) requirements and logic of DATEV accounting software. Applications rules are referenced here that, based on experience, are relevant to the implementation of an interface.

Overview of Data Types

When using the DATEV format, a differentiation is made between the following types of data:



4.1.1 Master Data

Account Labels

Account labels which apply to ledger accounts or personal accounts used in financial accounting can be exchanged using the DATEV format. Personal account labels are automatically transferred to open item bookkeeping. A master record is comprised of the respective account number, the corresponding label, and the language ID.
Descriptions of the fields can be found in chapter 3.5.3.

Customer and Vendor Entries

Customer and vendor entries in open item bookkeeping can also be exchanged using the DATEV format.
Descriptions of the fields can be found in chapter 3.5.5.

Miscellaneous Addresses

The “miscellaneous addresses” for open item bookkeeping accounts can also be exchanged with the DATEV format.
Descriptions of the fields can be found in chapter 3.5.10.

Business Partner Field "Miscellaneous Account"
Usually you create one individual ledger account number for each business partner, and this is where the information about that business partner is saved.

Marking an account as a **"Miscellaneous Account"** allows you to combine one-time customers and one-time vendors under one and/or several **miscellaneous account numbers** (such as the number 20000 for Miscellaneous Customers A–K, 20001 for Miscellaneous Customers L–Z, etc.). You can mark every account as a **miscellaneous account**.

To manage **miscellaneous business partners**, we recommend only designating a few account numbers as **Miscellaneous Business Partners**, and using descriptive labels (names) – number 20000 for Miscellaneous Customers A–K, 20001 for Miscellaneous Customers L–K, etc.

In the **Miscellaneous Addresses** section of the program, you can edit the addresses of your miscellaneous business partners. These are your one-time customers and one-time vendors that were not created with their own account, but instead are managed with other business partners under one joint account number (= designating an account as "Miscellaneous"). When creating a new **Miscellaneous Address**, you should assign the address to a **Miscellaneous Account Number** (such as 20000 for Miscellaneous Customers A–K). Doing so will, for example, restrict the selection of accounts when manually assigning within the Payment Reminders section of the application. To do so, enter the address number and then select **Miscellaneous Account**.

For **Miscellaneous Business Partners**, one payment reminder or payment transform form will be created per open item (with recurring business partners, one cumulative reminder and/or payment transfer form will be created for the entire outstanding amount of all open items).

A payment reminder or payment transfer form for a **Miscellaneous Business Partner** must be assigned to a **Miscellaneous Address** upon creation, otherwise the reminder letter/account statement and/or payment transfer form will not be complete or deliverable.

You do not need to assign a miscellaneous address to settle an open item account. The basis for settling open items is the invoice number (regardless of whether a **Miscellaneous Address** was assigned beforehand).

When working with payment reminders or creating payments, **Miscellaneous Addresses** are only automatically assigned when the corresponding **Miscellaneous Address** was already assigned to the open item in the entry record.

Automatic Assignment

In order for the address to be assigned automatically from the entry record, the address number needs to be entered when creating the **Miscellaneous Address**. Assigning the **Miscellaneous Address** in the entry record is carried out either:

a) within the entry record using the shortcut **Ctrl + O**. This method gives you the option to select an existing **Miscellaneous Address Number** or create a new one using the business card window.

– or –

b) by importing an entry batch (in the DATEV format), for which the field **Address Number** has been filled out. When importing, the Address Number field is found in the field selection under **Open Item Bookkeeping Information | Miscellaneous Address Number**.

Manual Assignment

If the **Miscellaneous Address** cannot be assigned using data in the entry record, you need to manually assign the **Miscellaneous Address** when creating payment reminders/payments.

To do so, in the window switch to editing the created payment reminder/ payment transfer form in the **Address** tab, and click on the **Select Miscellaneous** button; alternatively, you can directly enter the information required.

Text Codes

Text codes (for cases related to agriculture and forestry SKR 14) can also be exchanged in the DATEV format.
Descriptions of the fields can be found in chapter 3.5.7.

Payment Conditions

Payment conditions can also be exchanged using the DATEV format.
Descriptions of the fields can be found in chapter 3.5.9.

4.1.2 Transaction Data (Entry Record)

A) Basic Components

Transactions are recorded in the form of entry records. DATEV entry records contain the following basic components (required information):

- Value
- Debit/credit label
- Account
- Contra account
- Invoice Date

Entries with a value of '0' are not valid.

Debit/Credit Label
The debit/credit label applies to the field **Account**.
If a debit label is indicated, the value is posted to the account in the **Account** field as a debit, and to the account in the **Contra Account** field as a credit.
If a credit label is indicated, the value is posted to the account in the **Account** field as a credit, and to the account in the **Contra Account** field as a debit.

Account/Contra Account
DATEV's standard chart of accounts contains 4-digit ledger accounts and 5-digit personal accounts. If necessary, these can be extended up to 8-digit ledger accounts and 9-digit personal accounts.
The accounts that are available for use should only be set up in coordination with the accountant, since it is also possible to assign alternative customized accounts.

Invoice Date
Entry dates cannot be recorded across different calendar years. Entry dates must be limited by December 31st of the year.

The invoice/receipt date in the entry record cannot be later than the **Date Until**. In contrast, an invoice/receipt date before **Date From** is valid, but not before the beginning of the fiscal year. (**Date From** and **Date Until** see chapter 3.5).

B) Optional Fields

Exchange Rate
An exchange rate is required for all entries in currencies of EU member states that have not yet introduced the euro, as well as all other currencies.
The exchange rate is always in relation to the euro. That means that the exchange rate will always be interpreted in the form
1 EUR = xxxx.xxxxxx XXX
This is the case regardless of whether bookkeeping is carried out with EUR as the base currency or in another currency.
The exchange rate can contain up to 6 decimal places and a maximum of four digits before the decimal point.

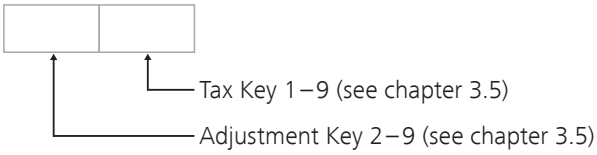
Bookkeeping Example (EUR)
Base bookkeeping currency: EUR (euro)
Invoice with a value of 1000.00 CHF at an exchange rate of 1 EUR = 1.520400 CHF
Data recorded:

Field	Value
Value	1000.00
Transaction Value Currency Code	CHF
Exchange Rate	1.5204

With the introduction of the euro, the exchange rate switched from direct to indirect notation. An entry of, for example, 1 CHF = 0.80 EUR leads to an incorrect result when converting. In indirect notation, the exchange rate is expected with a value of 1, i.e. as stated above in the form 1 EUR = 1.520400 CHF.

Posting Key
The posting key is a combination of the adjustment key (first digit from the left) and the tax key (second digit from the left). An overview of tax keys and/or adjustment keys can be found in chapter 3.5. Proper usage is explained in the following section.

Posting Key



Invoice Field 1
Invoice field 1 is the "key" for managing open items.
A payment or credit is only offset against an open item when the invoice/receipt number of the payment or credit memo is identical to invoice field 1.
The following characters can be used: 0-9, A-Z, a-z, as well as the additional characters $, %, &, *, +, -, / .

Invoice Field 2
For accounting carried out **without** the use of open item bookkeeping, this field can be used as desired for an additional invoice/receipt number. This field can be filled with a 12-digit alphanumeric entry. The following characters can be used: 0–9, A–Z, a–z, as well as the additional characters $, %, &, *, +, -, / .
Accounting carried out using open item accounting can only use invoice field 2 as desired when an incoming or outgoing payment or credit needs to be entered. When it comes to customer debit positions and vendor credit positions, only information regarding payment due date, payment proposal, and reminders are valid for open item accounting. If invoice field 2 contains invalid data, the entire entry will be rejected.

Entering Payment Due Date Using Invoice Field 2
When it comes to entries for incoming and outgoing invoices (customer debit or vendor credit positions), a payment due date can be entered into invoice field 2 (5-digit or 6-digit, day, month, year).
Entries can contain a due date prior to the invoice date (such as when processing a return debit note). In this case, the entry must be booked onto a contra account designated as a bank or cash account.

Managing Payment Proposals Using Invoice Field 2
When using the payment proposal, you can enter a code which consists of one to four digits.
In this context, the first and second digits from the right denote the payment condition and the third and fourth digit from the right the client's bank. Both the payment conditions as well as the bank need to be saved in the master data.

Example:
Payment condition 15: Enter **15**
Client bank 1 to 99, for example bank 4: Enter **400**
The codes can be combined with one another.
If, for example, an invoice from bank 4 needs to be paid in accordance with payment condition 15: Enter **415**.

Please note that at the time these guidelines were printed, only two-digit payment conditions can be entered into Invoice Field 2 (valid values: 10 to 97). Should you require a third-digit code, please contact the DATEV's Invoicing Application Customer Service. They will inform you whether or not this is now possible.

Exclusion from the Payment Proposal and/or Payment Reminders using Invoice Field 2
Entering the number **9** prevents this item from being suggested for payment proposals and payment reminders.

Discount
The amount to discount a payment is specified in the Discount field.

Currency Code
The **Currency Code** field is where the currency's three-digit ISO code is recorded. This code defines the currency in which the entry record is saved (applies to the fields **Value** and **Discount**).

Posting Text
This field can be used to enter a posting text of up to 60 characters.
In addition, the following control characters are either valid or invalid (comma) as the first character of the text:

. (Period)
Entering the "." character as the first character of the text interrupts the condensing process (for more on condensing, see chapter 4.5.1). Every record with this condition fulfilled will be removed from the condensing process and printed individually on the personal account. The condensing process is then continued afterwards.

! (Exclamation Point)
Entering an "!" as the first character of the text controls whether the text is copied to the reason for payment field in the payment proposal. Entering the character "!" once again marks the end of the individual payment reason text; an additional posting text can be entered after this.

, (Comma) is not valid
A comma as the first character is not valid.
Please Note: The entry will be rejected.

4.2 Entries with Value-Added Tax

Gross Value Principle
At DATEV, value-added tax is always deducted from the gross value. The advantage of doing so is that when posting invoices, the value-added tax does not need to be posted separately.
The tax calculation is carried out automatically when the entry uses either what's known as an **automatic account** or a **tax key**.

Attention:
Entering both a tax key and an automatic account in one entry is not allowed. The entry will be rejected.

Automatic Accounts for VAT Calculation
Automatic accounts use a feature that calculates the value-added tax from the respective gross value of a transaction. The application posts the value minus the value-added tax to the automatic account. The system automatically posts the value-added tax itself to the designated collective value-added tax account for the respective tax rate.

Suspension of Value-Added Tax Calculation
If you would like to post transactions without tax to automatic accounts, you need to enter adjustment key **4** in the **Posting Key** field. This adjustment key suspends the account's automatic calculation feature.

Value-Added Tax Key
The use of the tax key in the entry record is another way to calculate the value-added tax. Using the tax key, the software application automatically calculates the value of VAT and subsequently posts it to the respective collective account.

Attention:
Entering both a tax key **and** an automatic account in one entry is not allowed. The entry will be rejected.

Tax Key Table
Tax Key Meanings:

1 VAT-exempt (with input tax deduction)

2 VAT 7 %

3 VAT 19 %

4 locked

5 VAT 16 %

6 locked

7 Input tax 16 %

8 Input tax 7 %

9 Input tax 19 %

Different tax keys are available for input tax and value-added tax, including for both the full and reduced tax rate.
Customized automatic accounts or individual value-added tax keys (50–59) can be created for posting taxable values at tax rates other than those indicated in the aforementioned table. Both of these are set up in the master data.
Using tax key 1 discloses the posted values in the preliminary VAT return as VAT-exempt **with** an input tax deduction. VAT-exempt values **without** an input tax deduction that are to be included in the preliminary VAT return can only be assigned by posting to the automatic account 8100 (SKR 03) or a customized tax key.

EU Transactions
Additional tax keys and automatic accounts are available for posting EU transactions. Additional information can be found in chapter 4.8, **Posting EU Transactions**.

4.3 Posting Payments with Cash Discount Deductions

Through the additional input of a cash discount in the cash discount column, you have the ability to allow the application to automatically post the discounts. The requirement is that you must be posting a payment transaction with a cash account specified in the account field and either a personal account or a receivables or liabilities account specified in the contra account field. Depending on the tax key indicated in the record, the discount will be posted to the appropriate collective discount account (discounts granted/discounts received) and the value-added tax will be adjusted automatically.

Rules
The actual amount of the payment is indicated in the value column. The discounted amount is always listed in the discount column including the VAT (maximum of 10 digits including 2 decimal places). A cash account must be specified in the **Account** field, and a personal account or receivables and liabilities account (with tax key, if applicable) must be specified in the **Contra Account** field.

Value-Added Tax Adjustment – Full Tax Rate
The software application automatically deducts the full tax rate from the cash discount amount, without requiring a tax key to be entered.

Other Tax Rates
The corresponding tax key needs to be entered into the **Posting Key** field, for example the tax key **2** for 7 % value-added tax.

4.4 Posting Payments Using Taxation Based on Value of Actual Receipts

When posting payments, the application automatically transfers the value-added tax posted from **value-added tax not due** to **value-added tax due**. The requirement is that you must be posting a payment transaction with a cash account specified in the account field and either a personal account or a receivables account specified in the contra account field. In this context, the correct tax amount is then calculated based on the tax key indicated in the entry.

Value-Added Tax Calculation – Full Tax Rate
The application automatically calculates using the **full tax rate**, even without entering a tax key.

Other Tax Rates
Should another tax rate be used for calculation, the respective tax key needs to be entered in the **Posting Key** field, for example tax key **2** for 7 % value-added tax.

4.5 Splitting Invoices

Sometimes multiple invoice items need to split across different revenues or goods receipt accounts. There are several ways to do this.

Incoming Invoice
If an incoming purchase invoice needs to be split over different incoming goods or expense accounts, you can post the items using tax keys or automatic accounts in order to let the application calculate and post the input tax.

Outgoing Invoice
If an outgoing invoice needs to be split over different revenue accounts, you can post the items using tax keys or automatic accounts in order to let the application calculate the value-added tax.

Please Note:
The value-added tax **cannot** be posted directly, since the amount would not be incorporated into the preliminary VAT return.

Condensing or Clearing Account
Several methods exist for posting split invoices. The most common method is using the condensing feature (See chapter 4.5.1). Alternatively, you can also split the amounts using a clearing account (see chapter 4.5.2).

Both methods have advantages and drawbacks.
When directly posting and condensing the amounts using a personal account, a record is created for each partial amount of the invoice. This can result in several entries with small gross values. Many small gross values increase the risk of encountering rounding differences, since the total gross value of the invoice is usually calculated from the total net value of the invoice.
When posting using a clearing account, you can no longer see which revenue accounts were posted to on the personal account. The relationship between personal accounts and revenue accounts is lost. This has various effects on subsequent posting assistance, such as when manually posting payments with discount deductions.

4.5.1 Direct Booking (Condensing)

Condensing (Standard Version)
You can create an entry for every partial amount of an invoice. When posting to **personal accounts** (customer or vendor accounts), records with the same invoice date (date) and the same invoice number (invoice field 1) will be automatically consolidated by the application. This is called **condensing**. Condensing is only possible on **customer accounts** with debits and **vendor accounts** with credits. Please Note: Entries without an invoice number or with invoice number 0 and general reversals are not included in the condensing process).
To interrupt condensing for entries that are condensed automatically by the application, please enter a period (.) as the first character of the **Posting Text** field. Every entry with this condition fulfilled will be removed from the condensing process and printed individually on the personal account. The condensing process is then continued afterwards.
When it comes to value-added tax to be posted, these transactions can be posted in two different ways:

Using a Tax Key
The value-added tax is disclosed on the invoice as a total value. When posting outgoing invoices, the VAT cannot be posted directly (in accordance with DATEV's gross value principle), since doing so would cause the preliminary VAT return to contain incorrect values. The grand total of the invoice is split gross onto the revenue accounts without automatic processing, and VAT is calculated by the system using the corresponding tax key and posted to the appropriate collective tax account. The amounts posted to a personal account are consolidated (condensed) as a result of having the same invoice number (invoice field 1) and the same invoice date.

Using Automatic Accounts
The grand total of the invoice is posted gross to the revenue accounts (automatic accounts). The value-added tax is calculated using the account function saved in the master data, and then posted to the corresponding collective tax account. The amounts posted to a personal account are consolidated (condensed) as a result of having the same invoice number (invoice field 1) and the same invoice date.

4.5.2 Splitting Using a Clearing Account

An alternative method is first posting the total amount to a clearing account, and then distributing the partial amounts across the revenue accounts. When it comes to the value-added tax to be posted, this is possible in two different ways:

Clearing Account without the Automatic Feature with a Tax Key
The value-added tax is disclosed as a total amount on the invoice, and when posting outgoing invoices, it cannot be posted directly (in accordance with DATEV's gross value principle), since doing so would cause the preliminary VAT return to contain incorrect values.
The grand total of the invoice is posted gross to a clearing account without automatic processing according to the tax key entered. Based on the tax key, value-added tax is calculated and then posted to the corresponding collective tax account. The individual classes of goods are then posted net from the clearing account (without a tax key so that VAT is not calculated twice) to the appropriate revenue accounts (not automatic accounts). If the corresponding revenue accounts are automatic accounts, this transaction needs to be posted with adjustment key 4 to suspend automatic processing.

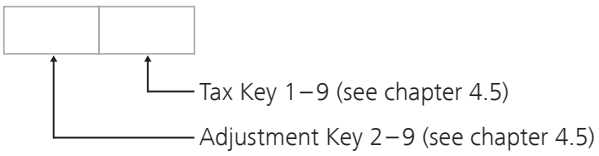
Clearing Account with Automatic Processing
As an alternative, a clearing account can also be used as an automatic account. When subsequently splitting the invoice amount across the various revenue groups, however, automatic processing must be suspended each time using the adjustment key 4 (suspension of automatic processing) to prevent VAT from being calculated twice.

4.6 Adjusting Entries

If a posted entry contains an error (such as an incorrect account number), you can use adjustment keys to make corrections.

Adjustment Key – 1st Digit of the Posting Key

Posting Key



The adjustment key must always be entered in the first digit from the left in the **Posting Key** field (empty spaces need to be filled with zeros), and applies to the entire entry.

Adjustment Key 2 = General Reversal
If a posted entry needs to be corrected, you need to reverse the entry. In order to prevent annual transaction figures for the accounts from being inflated as a result of these adjustments, you can use the general reversal key 2. This key causes the correction not to appear on the contra side, but instead on the same side as the original posted transaction with a – (minus sign).

Adjustment key 2 can also be used when the record does not contain a VAT key. In this case, a 0 must be entered as the second digit.
After making an adjustment using a general reversal, the second step is to post the transaction correctly.

Adjustment Key 4 = Suspension of Automatic Processing
Adjustment key 4 is used to suspend automatic processing (automatic VAT calculation) for the accounts affected by the transaction.

Adjustment Key 8 = General Reversal with Locked Automatic Processing
You can use general reversal key 8 to adjust posted entries that have automatic processing locked by adjustment key 4.

Adjustment Key 7
A general reversal of a posted entry with a customized VAT key can be achieved using key 7 (70–79). The effect is the same as that of using general reversal key 2.

Customized Tax Keys	Associated General Reversal Keys
50	70
51	71
52	72
…	…
59	79

Adjustment Key 9 = Split Input Tax
When entering this key, input tax amounts will be posted to the respective **Split Input Tax** account (based on tax rate). Depending on the underlying tax case, this needs to be split between creditable and non-creditable input tax (reclassifications).

Adjustment Key 3 = General Reversal with Split Input Tax
This key must be used when an entry containing key 9 (split input tax) needs to be adjusted using a general reversal.

Table of Adjustment Keys

2 = General reversal key (the most-often used adjustment key)

3 = General reversal for split input tax (extension of adjustment key 9)

4 = Suspension of automatic processing (locked function)

5 = Customized VAT key (50–59)

7 = General reversal key (70–79) for customized VAT keys

8 = General reversal with suspension of automatic processing (extension of adjustment key 4)

9 = Split input tax

For information on EU adjustment keys, see chapter 4.8, **EU Entries**.

4.7 Opening Balance Sheet Values and Values Carried Over

Opening Balance Entries – Carrying Forward Annual Values
This entry is usually only required when first beginning bookkeeping using a DATEV application. In the following years, the carry forward function automatically carries the values forward to the new fiscal year as opening balance values.

Opening Balance Values – Ledger Accounts (SKR 03)
Opening balance values are automatically carried forward using account **9000**.

Opening Balance Values – Personal Accounts (SKR 03)
Opening balance values for individual customer accounts can be recorded using account **9008**.
Opening balance values for individual vendor accounts can be recorded using account **9009**.

The current collective accounts for trade receivables (accounts 1400 in SKR 03 and 1200 in SKR 04) and trade payables (accounts 1600 in SKR 03 and 3300 in SKR 04) cannot be posted to directly. Entries are posted using the individual personal accounts.

Aggregate Carry forward Account 9090
When switching to the DATEV system during the middle of a fiscal year, values (annual transaction values) can be carried forward for each account using account **9090**.
Carrying a value forward using an automatic account does not invoke a tax calculation.

Rules
For all entries using accounts 9000, 9008, 9009, and all other personal and ledger accounts affected when carrying values forward, **OB ENTRY** will automatically be shown in the text field – unless you entered a customized text into the entry.

4.8 EU Entries

Value-Added Tax Identification Number and Tax Rate in the Transaction Record

According to the Single Market Act, entries must be recorded using the aforementioned basic rules – the entry can be expanded to include two additional fields, however: the VAT ID number, comprised of the EU country code and the identification number, and the field for the VAT rate of the other EU member state.
The VAT ID number is a multi-digit combination of letters and numbers. The two letters at the beginning are the EU country code, and identify the respective EU member state, such as DE for Germany. This is followed by a maximum of 13 digits, comprised of a combination of letters and numbers.
The tax rate refers to the tax rate of the other EU member state, which is only to be used in specific cases, however.

Saving the VAT ID Number in the Master Data

When it comes to customer/vendor accounts, the VAT ID number issued can be saved for the respective customer/vendor. If the entry corresponds to an EU transaction, this VAT ID number will be used. A VAT ID number entered in when posting the entry takes precedence over a number saved in the master data, however.

EU VAT Keys and Adjustment Keys for EU Entries

EU VAT Keys	Meaning	Adjustment Keys for EU Entries	Valid Content for the VAT ID No. and Tax Rate Fields
10	Valid for taxable revenue generated in another EU member state. The respective applicable tax rate is indicated in the entry in the field Tax Rate, which has been created for this purpose.	60 (Used for the general reversal of entries using EU VAT key 10)	The EU country code and tax rate are required
11	Tax-exempt intra-Community deliveries to recipients with a VAT ID number	61 (Used for the general reversal of entries using EU VAT key 11)	No input or VAT ID number
12	Intra-Community deliveries taxable at the reduced German tax rate	62 (Used for the general reversal of entries using EU VAT key 12)	No input or EU country code
13	Intra-Community deliveries taxable at the full German tax rate	63 (Used for the general reversal of entries using EU VAT key 13)	No input or EU country code
18	Intra-Community purchases taxable at the reduced German tax rate	68 (Used for the general reversal of entries using EU VAT key 18)	No input or VAT ID number
19	Intra-Community purchases taxable at the full German tax rate	69 (Used for the general reversal of entries using EU VAT key 19)	No input or VAT ID number
47	Other tax-exempt services in another EU member state pursuant to Art. 18, Paragraph 1, Clause 2 of the German Value-Added Tax Act	87 (Used for the general reversal of entries using EU VAT key 47)	No input or VAT ID number

Automatic Accounts for EU Entries

As an alternative to tax keys, automatic accounts have also been included in DATEV's charts of accounts.

EU VAT Keys and Automatic Accounts

When posting entries, the value-added tax keys or automatic accounts cause the application to automatically calculate the amount of VAT and post it to the corresponding collective account. Taxable intra-Community purchase transactions (EU VAT key 18/19 or adjustment keys 68/69) must be posted at net value.
In addition, as a result of the VAT key, the respective entry will be included in the preliminary VAT return and other VAT-related analyses. As an alternative to VAT keys, predefined or customized automatic accounts have the same effect (see the table of EU accounts). Transactions such as subcontracting cannot be posted using EU tax keys; automatic accounts especially set up for this purpose are available instead. Entering a tax rate in the field **Tax Rate** is only valid in combination with the EU tax rate key 10.

Please Note:

Entering both a VAT tax key **and** an automatic account in one entry is not allowed. The EU VAT key is entered into the **Posting Key** field and applies to the entire entry.

Use of EU Adjustment Keys with the "General Reversal" Function

The two-digit adjustment key with the **general reversal** function is entered into the **Posting Key** field similar to the VAT tax key.
This key has the effect on reverse entries, i.e. posting the incorrect entry once again and entering the VAT amount with the opposite sign, so that the value is posted to the same side as the original incorrect entry with a negative sign for all accounts involved in the entry. This prevents inflated annual transaction figures. After making an adjustment using a general reversal, the second step is to post the entry correctly.

Discount Entries

When posting payments for EU transactions, the discount amount can be recorded in the discount field when, in doing so, the matching EU VAT or adjustment key is also provided in the entry.

Valid Inputs in EU Fields when Posting with EU Automatic Accounts

The following table shows what you can and cannot enter into EU fields when posting different EU cases with automatic accounts.

EU Case	Valid Inputs in EU Fields	Invalid Inputs in EU Fields
Tax-exempt intra-Community delivery	VAT ID number or no input	Tax rate and/or EU member state
Tax-exempt intra-Community delivery of new vehicles; buyer without VAT ID number	EU member state or no input	VAT ID number and/or tax rate
Tax-exempt intra-Community delivery with active subcontracting	VAT ID number or no input	Tax rate and/or EU member state
Taxable intra-Community purchase	VAT ID number or no input	Tax rate and/or EU member state
Taxable intra-Community purchase w/o input tax deduction	VAT ID number or no input	Tax rate and/or EU member state
Tax-exempt intra-Community purchase	VAT ID number or no input	Tax rate and/or EU member state
Taxable intra-Community purchase of new vehicles	EU member state or no input	VAT ID number and/or tax rate
Tax-exempt delivery to other EU member states	EU member state or no input	VAT ID number and/or tax rate
Shipments delivered that are tax-exempt in Germany and taxable in other EU member states	In general, no inputs are valid, since the EU member state results from the tax key	In general, no inputs are valid
Other services rendered that are tax-exempt in Germany and taxable in other EU member states	VAT ID number or no input	Tax rate and/or EU member state
Other services rendered that are tax-exempt in Germany and taxable in other EU member states (prior to reverse charge method)	VAT ID number or no input	Tax rate and/or EU member state
Other tax-exempt services in another EU member state pursuant to Art. 18, Paragraph 1, Clause 2 of the German Value-Added Tax Act	VAT ID number or no input	Tax rate and/or EU member state
